Scoping Agent

Defines the discovery scope by ingesting company context and uploaded client materials, surfacing relevant workflows for human approval, and producing tailored interview guides with a mapped fact-base for downstream value sizing.

CONCEPT

SCOPE

PURPOSE

- Accept company name, function types, and uploaded client materials to define engagement scope.
- Pull and surface relevant workflows for the given company and function context.
- Require human review and approval of the target workflow list before proceeding.
- Produce a preliminary list of client workflows as the foundational scoping output.

DESIGN PRINCIPLES / GUARDRAILS

- Always require human approval of the workflow list before generating interview questions.
- Ground all question generation in the specific approved workflows — avoid generic questions.
- Ingest and apply uploaded client materials to tailor scope and questions.
- Output a structured fact-base requirements list to directly support the Improvement Initiatives Agent.
- Allow the human in the loop to add context, override workflow selections, or inject additional focus areas at any point.

KPIS / SUCCESS MEASURES

Time to produce scoped interview guide
-75% vs. manual

Workflow coverage rate
95%+ of relevant workflows surfaced

Interview guide approval rate (no major rework)
80%+

Fact-base requirements completeness
90%+

DESIGN

HOW IT WORKS

5-step workflow

1 Ingest Context

Accept company name, function types, and uploaded client materials.

↓ Document parser / retrieval layer

3 Human Approval

Present workflow list for review and approval before proceeding.

↓ Human review gate

5 Output Interview Guide

Produce the final interview guide including tailored questions per workflow and the data, facts, and information needed to support downstream value sizing

↓ Document generation + export layer

2 Pull Workflows

Surface likely workflows for the given function and company context.

↓ LLM + workflow knowledge base

4 Build Interview Guide

Generate tailored questions per workflow to test current understanding.

↓ LLM + prompt templates

INPUTS

5

- ▶ Company name and engagement context
- ▶ Function types (e.g., finance, operations, customer service)
- ▶ Uploaded client presentations, SOPs, and process materials
- ▶ Known hypotheses and strategic focus areas
- ▶ Desired interview length and SME seniority levels

OUTPUTS

4

- ◆ Preliminary list of client workflows (approved by human)
- ◆ Tailored interview guide per workflow
- ◆ Data, facts, and information requirements for value sizing

- ◆ Export-ready interview guide (Word / PowerPoint)

APPLICATION INTEGRATIONS

4

- ⇒ Internal knowledge base — Workflow libraries and prior engagement discovery archives
- ⇒ Document upload layer — Accepts client presentations, SOPs, and process materials
- ⇒ Live Interview Agent (Agent 2) — Passes approved interview guide as primary input
- ⇒ Document export layer — Word / PowerPoint generation for interview guide
