Current-State Process Mapping Agent

Converts interview transcripts and supporting materials into structured current-state process maps using ProcessAI, surfacing pain points and improvement opportunities.

CONCEPT

SCOPE

PURPOSE

- Convert interview transcripts, notes, and recordings into structured end-to-end workflow maps.
- Leverage ProcessAI to automate swim-lane process map generation, pain point identification, and opportunity surfacing.
- Produce process fact packs ready for stakeholder validation and downstream use.
- Identify handoffs, bottlenecks, workarounds, and exception paths across each workflow.
- Validate AI-generated outputs with stakeholders before finalizing.

DESIGN PRINCIPLES / GUARDRAILS

- Leverage ProcessAI as the core engine for process map generation and pain point extraction.
- Never infer process steps not explicitly present in source materials.
- Flag ambiguous or incomplete process steps for human review.
- Preserve exact language and terminology from interviewees in outputs.
- Maintain full source traceability from process map back to interview transcript.

KPIS / SUCCESS MEASURES

Time to produce current-state process map
-70% vs. manual

Pain point capture rate
90%+

Analyst edit rate post-stakeholder review
<20%

Process map source traceability
100%

DESIGN

HOW IT WORKS

5-step workflow

1 Ingest Materials

Load transcripts, notes, recordings, SOPs, and handoff documentation.

↓ Document parser / retrieval layer

3 Generate Process Maps

Produce end-to-end swim-lane workflow maps per process.

↓ Process mapping logic

5 Validate & Package

Review with stakeholders, refine insights, and produce process fact packs.

↓ Human review + export

2 Run ProcessAI Engine

Convert materials into initial process view with pain points and opportunities.

↓ ProcessAI engine / LLM extraction

4 Identify Pain Areas

Surface and categorize bottlenecks, workarounds, and exception paths.

↓ Pain point detection engine

INPUTS

5

- ▶ Interview transcripts and structured summaries (from Agent 2)
- ▶ Call recordings and CST notes
- ▶ Process SOPs and handoff documentation
- ▶ Stakeholder map and role context
- ▶ Prior process documentation and benchmarks

OUTPUTS

5

- ◆ End-to-end swim-lane process maps
- ◆ Pain point inventory with type and applicability
- ◆ Improvement opportunity list with effort/impact assessment

◆ Process fact packs for stakeholder review

◆ Export-ready documentation (Visio / PowerPoint / Word)

APPLICATION INTEGRATIONS

4

⇒ ProcessAI (McKinsey) — Core engine for automated process map generation and pain point extraction

⇒ Live Interview Agent (Agent 2) — Receives transcripts and structured interview summaries

⇒ Future State Agent (Agent 4) — Passes current-state maps and pain point inventory

⇒ Document export layer — Visio / PowerPoint / Word process documentation
