Future-State Workflow Mapping Agent

Generates AI-powered improvement initiatives and redesigns current-state workflows into future-state operating models with high-level build plans.

CONCEPT

SCOPE

PURPOSE

- Generate improvement initiatives grounded in current-state pain points and process maps.
- Redesign current-state workflows into future-state operating models that reflect approved improvements.
- Produce a delta view showing explicitly what changes versus current state.
- Draft high-level build plans per initiative for engineering and product handoff.
- Differentiate AI-enabled automation from process redesign opportunities.

DESIGN PRINCIPLES / GUARDRAILS

- Always anchor future-state design to current-state process maps.
- Ground every improvement initiative in a specific identified pain point.
- Show explicitly what changes and what stays the same in the redesign.
- Flag dependencies between initiatives in the future-state design.
- Never design a future state for an unapproved initiative.

KPIS / SUCCESS MEASURES

Pain point coverage in future state 95%+	Redesign acceptance rate by team 80%+
Build plan completeness score 90%+	Time to first future-state draft -65% vs. manual

DESIGN

HOW IT WORKS

5-step workflow

1 Ingest Current State Load current-state process maps and pain point inventory from Agent 3. ↓ Retrieval layer	2 Generate Initiatives Produce improvement hypotheses grounded in specific pain points. ↓ LLM + initiative pattern library
3 Redesign Workflows Apply approved initiatives to redesign current-state workflows. ↓ LLM + process redesign engine	4 Produce Delta View Generate side-by-side current vs. future state comparison. ↓ Delta generation logic
5 Draft Build Plans Create high-level build plan per initiative for handoff. ↓ Build plan generation + human review	

INPUTS

5

▶ Current-state process maps (from Agent 3)
▶ Pain point inventory and improvement opportunities (from Agent 3)
▶ Client technology constraints and design standards
▶ Strategic priorities and known initiative constraints
▶ Engineering and product requirements

OUTPUTS

5

◆ Improvement initiative list grounded in pain points
◆ Future-state workflow diagrams per process
◆ Current vs. future state delta view

- ◆ High-level build plan per initiative
- ◆ Export-ready design documentation

APPLICATION INTEGRATIONS

4

- ⇒ Process Mapping Agent (Agent 3) — Receives current-state maps and pain point inventory
- ⇒ ProcessAI (McKinsey) — Informs redesign logic with process intelligence
- ⇒ Value Modeling Agent (Agent 5) — Passes approved initiatives and build plans for sizing
- ⇒ Document export layer — Visio / PowerPoint / Word design documentation
